The Gold Bullion Sale

The Brand for INTEGRITY - PERFORMANCE - EXCELLENCE

Welcome to our sixteenth annual Gold Bullion Bull Production Sale! Just as in the past the sale will be held at the Kansas Bull Development on Onaga Road northeast of Wamego, KS on Sunday March 4th, 2018.

Since its beginning in 2002, the Gold Bullion group has always operated with the goal of providing elite Simmental Genetics to both commercial and fellow purebred breeders through artificial insemination and embryo transfer. Although some of the members have changed over the years, the same attention to detail and pursuit of perfection continues on. Our goal as a group is not only to provide breed leading Simmental genetics, but also to build a relationship and partnership with our customers. We take pride in trying to be more than just a face on sale day, but instead be a resource for your livestock operation throughout the year(s).

Our yearling bulls are developed on a mixed ration with a target of 3/lb/d gain. We also offer a set of 18 month Fall Yearling bulls that you will find in lots 25-31. These fall bulls are developed on grass with minimum supplement through the summer months resulting is lighter yearling weights.

All bulls will sell with a breeding soundness exam, have tested negative for PI-BVD, and were vaccinated for Lepto-Vibrio. All Sim-Angus bulls are non-carries of Arthrogryposis (Curly Calf Syndrome) and are non-carries of Neuropathis Hydrocephalus (by pedigree or DNA test). Ultrasound data for carcass traits are also included in the catalog as well.

This is a video auction and the bulls will not enter the ring to sell, so please take the time to evaluate them ahead of time. If unable to attend sale day bulls will be on display the day before the sale or anytime at the KBD by appointment, as we always enjoy visiting one on one. Bulls are cataloged in sale order and are grouped by sires and/or similar pedigrees for your convenience.

We encourage you to visit our website for more information about each individual breeder and for videos of the bulls at www.goldbulliongroup.com.

Thank you to all our returning customers for your loyalty and trust in our breeding programs! For potential new customers, thank you for taking the time to review our offering and for your interest in the Gold Bullion Bull Sale and we look forward to seeing you the first Sunday in March!

GOLD BULLION
GROUP

16th Annual Production Sale

Sunday, March 4, 2018 at 1:00 p.m.

Kansas Bull Development, Wamego, KS

Location

Kansas Bull Development is located 4 miles east of Wamego on Hwy. 24; then 6.5 miles north on the Onaga Road. Watch for signs!

Sale Schedule

Saturday	1:00-4:00 p.m. Bulls on display
Sunday	10:00 a.m. Coffee and coffee cake
	11:30 a.m. Complimentary Lunch
	1:00 p.m. **SALE**

Auctioneer:

Col. Garren Walrod - 785-565-1221

Sale Staff/Livestock Press

Andrew Sylvester - *Kansas Stockman*	785-456-4352
Guy Peverley - *The Stock Exchange*	785-456-4390
Ron Hinrichsen - *Independent*	*785-457-2848*

Accommodations

Wamego Inn & Suites - Hwy. 24 & Lilac Lane
Wamego, KS 888-978-1944
Please call if you need help with your travel arrangements.

Insurance

Insurance will be provided by Jensen Livestock Agency. Shelia Jensen - 785-262-1116.
We highly recommend purchasing insurance if you do not take your bull on sale day, as cattle become the property of the buyer at the end of the sale.

Pick-Up Discount/Volume Discounts/After Sale/Delivery

A $50 per bull discount is available to buyers who take their bull purchases home sale day. We will feed all other bulls free until April 1 and then $2.50 per day for up to May 1, 2018. Bulls should be picked up by May 1, 2018. Bulls will be delivered free up to 100 miles from Wamego. We will work with you on economical delivery beyond that point. Volume Discounts - You will receive 5% discount if you purchase 3 or more bulls.

Announcements

Announcements made sale day and/or from the auction block during the sale, take precedence over printed material. Anyone attending this sale attends at their own risk. Sale staff, hosts, and/or their representatives or employees will not be responsible for any personal injury or damage to any attendee or his/her property.

Sale Day Phone Numbers

Ralph Brooks	785-556-0385

Darren Drake	785-410-1253
Scott Schaake	785-456-4949
Troy Marple	785-250-0522
Ryan Bodenhausen	785-221-3284
Garrett Parsons	832-651-3634

Sale Terms and Conditions

All animals sell under the terms and conditions set forth by their representative breed association.

Health/Management

All bulls have received IBR, BVD, P13, BRSV, 7-way blackleg; and at least two rounds of Ivermectin or Dectomax (for internal and external parasites). In addition, the bulls were vaccinated with Spirovac VL5 (new Lepto-Hardjo + four other strains). All bulls were tested for brucellosis, and all bulls tested negative for PI/BVD. The fall bulls will have lower growth and carcass numbers as they were produced on grass until July and then brought along slowly.

Bulls/Fertility Guarantee

All bulls were fertility tested by Vincent Traffas DVM, Manhattan, Kansas, and sell as guaranteed sound breeders for 4 breeding seasons. This guarantee does not include loss due to abuse, neglect, illness and/or acts of God (lightning, flood, etc.). We recommend retesting of bulls before pasture turn out. We also strongly recommend death insurance. Please refer to our Four Season Breeding Guarantee on page 4. Contact any Gold Bullion member with questions.

Semen Interest

Each owner is retaining1/3 semen interest in all bulls unless otherwise announced. For most commercial programs, this will not interfere with the natural service use of the bull. It means that the breeder may want to arrange with the buyer to collect semen on a bull. Or, in the case that the bull proves to be a superior sire, and the buyer and/or breeder market semen on a bull, the breeder would share in 1/3 of the profit and get semen at cost.

Catalog Preparation

Catalog prepared by: Peverley Productions (785) 456-4428
Pictures by: Melissa Schaake

On Line Phone Bids

If you are unable to be at the sale it will be broadcast live on DVAuction. Make sure you call ahead to register for your online bidding. To bid go to http://www.dvauctin.com

The Value of Performance

Simmental and SimAngus bulls can easily add 30-50 lbs. to weaning weights in British based cowherds, and their progeny will perform well in the feed yard and on the rail if you retain ownership until harvest. In addition, females from Simmental and SimAngus sired calves would make great replacements, especially when the females are Simmental x British crosses. Using current calf prices, a bull that sires an average of 25 calves per year for 4 years and adds 30 lbs. average weaning weight per calf at $150/100 lbs. would be worth at least $4,500 more than the price of a bull that adds no additional weight at weaning. You can do the math if they add more weaning weight than 30 lbs. and sell for a higher price than this example.

For producers who keep replacement females and retain ownership through the feedlot of all steers and heifers not kept for replacements, the ASA All Purpose Index (API) does a great job of identifying potential value differences among bulls. For example, a bull with an API of 130 would be worth $30 more per calf than a sire with an API of 100. Using these two example API values, if a bull produces 30 calves per year for 4 years, the value difference between these two bulls is $3,600!

Benefits of Crossbreeding

Capitalizing on 'heterosis' by crossbreeding is a very valuable tool in beef cattle production. Probably the most significant and long term study of heterosis was conducted by the USDA Agricultural Research Service in Nebraska. That study showed that 80 crossbred cows producing crossbred calves are as economical in life cycle production as 100 straight bred cows raising straight bred calves! This 20% bonus in efficiency starts with the increased fertility of crossbred cows, which is followed by increased vigor and hardiness of the newborn calves. Crossbred cows producing crossbred calves wean a higher percentage of calf crop and the calves are heavier. This carries over to increased performance of the calves in the feedlot. Crossbred calves also usually sell for higher prices. In addition to all of these advantages, longevity of crossbred cows is also increased, which means that more heifers can be sold or finished in a feedlot rather than kept for replacements.

Using Gold Bullion Simmental and SimAngus bulls on Angus based cows or other British breeds to create Simmental crossbred feeder calves and replacements is a great way to capitalize on heterosis. SimAngus (Angus or Red Angus) crossbred calves and replacement females are second to none as either feeder calves or replacement females! Research at the U.S. Meat Animal Research Center shows that Simmental and Angus breeds rank first or second among Continental and British breeds, respectively, in nearly all traits studied.

Using SimAngus bulls (1/2 or 3/4) on SimAngus females capitalizes on approximately 85% of the heterosis obtained from a three-breed rotational crossbreeding program. This is also a very convenient system because a producer does not have to have different pastures for different breeds of bulls. This system also stabilizes a herd at approximately 50% Continental x 50% British breeding. In addition, SimAngus bulls have an advantage in longevity.

Ultrasound Measurements Explained

Fat Thickness - measured at the 12th-13th rib and reported in inches. Most of the fat thickness measurements on these bulls are in a very desirable range; which means they have some fat cover, but are not fat.

Ultrasound Measurements Explained

Ribeye Area - measure at the 12th-13th rib and reported in square inches. REA is an important component of the USDA yield grade determinations of beef carcasses. Larger ribeyes result in more desirable yield grade numbers and a higher percent of the carcass as trimmed retail product. Yearling bulls should have at least 1.1 square inchest/100 lb. of live weight, and larger ribeye areas are generally more desirable. However, extremely large ribeyes (≥ 1.3 square inches/100 lb. of live weight) are not necessarily desirable.

%Intramuscular Fat - percentage of Intramuscular Fat, (%IMF) measured in a longitudinal scan of the ribeye muscle from the 11th to the 13th rib. It is a measure of marbling, which is the primary factor that determines USDA quality grade of carcasses. %IMF values for yearling Simmental bulls generally fall in the range of 2.0 to 4.5%.

Yield Grade - EPDS for Yield Grade are calculated from ultrasound measurements. YG is the USDA grading system for determining % meat yield differences among carcasses. USDA yield grades are numbered 1-5, with 1 representing a very muscular, trim carcass with a high % meat yield; and a 5 representing a very fat, light-muscled carcass with a low % meat yield. Yield grades can be calculated to the nearest 10th, such as 2.5, 3.9, etc. The average range for Simmental sired progeny would be about 2.2-2.8.

EPDs - values above or below breed average

CE	Calving Ease - % unassisted births from two-year old heifers. Example: For a CE EPD of 15, one would expect 10% more unassisted births than for a bull with an EPD of 5.
BW	Birth Weight - pounds of birth weight
WW	Weaning Weight - pounds of weaning weight due to growth.
YW	Yearling Weight - pounds of yearling weight due to growth.
MCE	Maternal CE - % unassisted births from calving daughters.
MM	Maternal Milk - pounds of weaning weight due to dam's milk.
MW	Maternal WW - pounds of weaning weight due to dam's milk and growth.
CW	Carcass Weight - pounds of carcass weight.
YG	Yield Grade - tenths of a yield grade.
MB	Marbling - percent of marbling score or %IMF
BF	Back Fat or Rib Fat - inches of carcass back fat thickness.
REA	Ribeye Area - square inches of ribeye
API	All Purpose Index - $ per cow exposed under an all-purpose-sire scenario.
TI	Terminal Index - $ per cow exposed under a terminal-sire scenario.

This will be a video auction only, no bulls will be in the ring"

GOLD BULLION GROUP

Four Season Breeding Guarantee

Bulls sell with a four breeding season guarantee on feet and semen. Full credit will be issued in the first breeding season (6 months) if a problem relating to bad feet or semen is experienced credit issued will equal the purchase price minus the salvage value. Credit reduces 25% of that value for each breeding season completed. Feet will be covered for unsoundness not caused by illness, foot rot, or other bulls. A vet statement listing the condition of the bull to verify the problem with the bull is required to receive credit. We reserve the right to semen check the bull before issuing credit. We are confident in our bulls and the service they will provide! Please contact any member of our group if you have any questions regarding this policy.

We believe in our bulls and want you, our customers to be as productive and profitable as possible. Please contact any Gold Bullion member with questions or for more details!

Need Help Marketing Your Stock? Let us help.

Good Bulls produce Good Babies. We want to bring Good Business people together to assist with placing your calves. We want your Good Babies! Please contact us to help with marketing your Gold Bullion sired calf crop!

This will be one of the first bulls to catch your eye. He is out of our top donor cow, SFI Betty Sue. He is stout, deep, thick, wide with lots of muscle. He ranks in the top 5% for WW, top 3% for YWT, top 4% for MB (ratioed 129), top 15% for API and top 3% for TI. This is definitely herd sire quality.

Herd sire Deluxe!! These two bulls truly are "Unique". We were so intrigued by their genetic potential that we have genomically enhanced their EPDs with GGP-HD. No other bull in the entire Simmental database can rival their combination of Marbling/REA/API/TI. They have both jumped through every hoop and have exceeded our expectations every time.
*Horsepower is an impressive individual from every angle, and scanned off the charts: ratioing 121 for IMF & 108 for REA. He ranks in the top 1% for 4 traits- Marbling/REA/API/TI
*Enforcer puts a 67# actual B.W. together with an impressive Y.W. and measured with a huge S.C. he to scanned well ratioing 109 for IMF & 103 for REA. He ranks in the top 1% for 5 traits- Milk/Marbling/REA/API/TI.
*To top it all off both bulls have incredibly good dispositions.

What an exceptional individual! To say we are excited to have a creature like this is an understatement. Essential is designed like good cattle should be; sound, stout, and good looking. He is backed by a cow family whose genetics run deep in our herd and a sire that won both Kansas City and Louisville. His scan figures are solid. Study closely as the possibilities are endless.

This is an easy bull to pick out. He is a big, stout, deep bodied bull with plenty of muscle. He is Genomic tested and parentage confirmed with enhanced EPD's. This bull is capable of working as a herd sire in a seedstock program. He ranks in the top 25% of the breed for CE, top 25% YW, top 20% for API and the top 30% for TI. His sire SAV Bruiser ranks in the top 5% for reduced feed intake, top 1% for feed efficiency, top 1% for total profit and the top 1% for maternal index.

Testimonial

Our family has been buying Gold Bullion bulls every year for the last 15 years.We were very pleased in the beginning with the weight gain of our calves but maybe the biggest asset is the improvement of our cow herd. Every year with keep the very best heifers and breed back to the top end bulls. Those calves continually top the market on sale day.

If you are looking for a bull to push your weaning weights up and add a dose of average daily gain to your calf crop look no farther than 101E. This bull has impressed me every step of the way from being our heaviest weaning weight bull to being the highest average daily gain bull on test! 101E ranks in the Top 10% for ADG and REA, Top 15% for YW and Top 20% for WW and CW. He also had a 108 ratio for YW and a 104 ratio for REA. His young dam is going to be a focal point of our operation for years to come.

These 3 flush brothers might best be described as the "Cowboy Kind". All 3 are big, stout, thick beef bulls.
*Integrated has been one of our favorites from day 1, he was our heaviest at weaning & yearling and gained over 4.5#/ day on test, he is full of performance and comes in an attractive black baldy package.
*Consolidated is a solid black more moderate version of his brother. He is big topped, big hipped, and packed clear full of red meat. He scanned with over a 16" REA.
*Unanimous is a solid black younger version of his 2 brothers. But what he lacks in age he makes up for in muscle shape. He is the most powerfully shaped expressively muscled of the 3. I think he is just going to get better & better the older he gets.

The dam of SFI Prospector produced a top seller last year that resides at Seward Cattle Company of Colorado. After you inspect this prospect chances are she may do it again. This extra good looking baldy is not only smooth made and perfect on his feet and legs, but his muscular shape compliments a 16" REA that ultra sound revealed. His mom will find her way to our donor program.

Cowboy Cut sons have been extremely well received. Cowboy Up is as complete as any. He started with a 79# actual B.W. & has a great set of EPD's across the board. He is moderate in his build, yet packed clear full of muscle. He scanned with over a 16" REA. Gained almost 4.5#/day and has a near perfect disposition.

These two ET brothers have an exciting future as herd sires. There pedigree includes cowboy cut, macho, and power stroke; which are some of the greatest Simmental genetics that have stood the test of time. Exclusive has the power, structure, and build to make an impressive herd sire and backs this with a solid set of growth and epd figures. Both bulls rank in the top 25% of the breed in 8 different EPD traits.

704D was our "Cover Boy" for our early sale advertising and rightfully so. This bull is one of the most physically impressive herd sires we have ever offered. He is long, ultra-attractive, big topped and extremely sound structured. Last year we sold a full brother that was the top selling fall bull, and 704D is even more unique. We put a large emphasis on fertility and Bacardi's dam is bred back for her 5th calf with only 5 units of semen. Extra age and weight should allow him to cover more cows. This guy is the real deal!

154D's dam calved this spring again at 10 years old. She has remained very youthful, has picture perfect feet and excels for fertility making her a great representation of the cows we strive to produce in our program. We also have 2 full sisters to 154D in production and we couldn't be more pleased with their udder structure and milking ability. 154D ranks in the Top 1% of the breed for REA and Milk, making him versatile whether your operation is looking to retain females or you feed your cattle out. Heterozygous Black.

The Bottomline cattle are well received by both purebred and commercial breeders alike. They are the kind of cattle that do so many things correctly, including vigor at birth, excellent growth and the ultra sound results suggest extra marbling. This bull comes from a time tested dam and I'm confident he will meet the needs for the most critical breeders.

Its hard to stack anymore muscle and power into a package as correct and balanced as what's found in SFI/MCCR Bottoms up. This mating is predictable and should leave behind some high quality replacements and even a few show steers that can be sold to the kids in the county.

This Homozygous Polled Sharper Image son should help moderate cow frame size while still optimizing growth at weaning as he ranks in the Top 10% for WW EPD. He also ranks in the top 4% for Docility and has a very laid-back attitude to match. 902E is super deep sided, soggy middled, sound structured and moderate framed. Furthermore, his double-digit CE combined with his breed leading growth make this Sim-Angus bull very valuable to any commercial operation.

I love this mating and full sibs are found in North Carolina and Canada. Both sides of his pedigree are excellent! Plus his extra good looks are complimented by a perfect set of feet and legs along with plenty of product. Top it off, he has excellent scan figures and balanced progeny differences. The total package!

Here is a hard to find Payweight son with a unique pedigree & rock solid EPD's. Weigh Up is a "Beef Bull" with plenty of rib & muscle in a very complete structurally correct package. To top it all off he has a wonderful disposition.

"Powerful" best describes Investor. He is built wide from the ground up with loads of rib & muscle. He scanned with nearly a 16" REA. Yet with his 66# actual B.W. a great set of EPD's & a pedigree that suggests he should be safe for heifers. Makes him a very useful option for most any operation. Take a long hard look at this one he doesn't have many holes in him.

Great heifer bull prospect, in a very unique package. We brought in this bulls sire, Lock Down, last year to use on our heifers & were very pleased with the job he did for us. Lock Up is a smooth made, good shouldered bull that has good C.E. projections and a negative B.W. EPD as well as a 78# actual B.W. What we think makes him quite interesting is, he scanned with our biggest REA just over 18" to ratio 115. Finally he has a near perfect disposition.

We continue to use this bull's sire, High Voltage, as we love what he has done for our program. He can get it done on both sides. He has left us with some tremendous daughters that are proving to be some of our very best young cows. A full sister to this bull was one of our high selling females in the Heritage sale a couple years age. Shocker is a prime example of what his sire does on the bull side. He is an impressive bull that has lots of length & extension & is full of red meat. He should add some stretch and add pounds to a set of calves. He was our #2 weight bull at weaning.

A pair of brothers that should be a perfect compliment to a set of Angus factored cows that need more frame, muscle and growth. Plus , if you need a set of calves that display the blaze face, then bulls like this with some extra chrome should help you accomplish that goal. Both bulls scanned extremely well for marbling.

This Yellowstone son scanned a 15.52 inch RE giving him a 107 ratio over his contemporaries. C45E also ranks in the Top 15% for CE yet stills ranks in the Top 15% for WW, while ranking in the Top 25% for 10 different traits! We purchased his dam from Marple Farms a little over 2 years ago for Brinley to start her own herd as we appreciated her balance of phenotype and EPDs. She has excellent feet; a perfect udder and her docility is second to none. This bull would be perfect for the modern cattleman looking for calves that come easy and replacement daughters that are easy fleshing and maintain a moderate mature weight.

Here are a pair of flush brothers out of the popular Select Sires bull Optimizer. We started using Optimizer last year as a new outcross sire. He raised our high performing bull in last year's sale. These 2 offer an outcross pedigree to most of the popular blood lines which allows for mating flexibility.
*Advance is a big, stout, powerful bull that should add pounds to any calf crop.
*Enhance is our youngest bull that exhibits plenty of rib & muscle he just continues to get better & better every day.

Don't discount this bull just because he is smaller. He is just younger. Look at his adjusted yearling weight. By turn out time he will be 14-15 months old and a much bigger bull and ready to go to work.

This bull is another younger bull that will only get better and larger with time. He would be a good one to put in one of those small pastures or to have around as a back up.

Grand Champion and People's Choice Award Winner at the 2018 National Western Stock Show. SFI Rreality E43C was selected by Dickinson Ranch of Gorhum, KS. He was the lead-off bull for Schaake Farms. A truly unique individual with tremendous acceptance by Simmental breeders across the country.

The Gold Bullion Consignors

My family homesteaded in this area in 1854 (The Kansas Flint Hills) and each generation has continued to live in the area. Brooks Simmental was started in 1986 with 2 black Simmental cows. I enjoy a small amount of showing and helping my granddaughter (Cassidy) show in 4-H, KJSA and the St Fair. I produce sound functional cattle with a good disposition. I work by myself and can't have cattle with bad attitudes. I strive for moderate framed and easy calving cattle but not giving up growth. Carcass quality is important as producing commercial bulls is my primary goal. All of this is produced thru AI and an extensive ET program. You will see the cow, Miss Kansas K 11G throughout my pedigrees. She is the # 2 cow in the Simmental breed for the number of calves produced, currently approaching 250 with a life time production of over $1,000,000.

The Schaake's have been breeding Simmental cattle since 1974, after an introduction to the breed when Scott showed the Grand Champion steer (Simmental x Hereford) at the county fair. Artificially breeding our black cows to Simmental bulls gave us our start in black-factored Simmental genetics in 1975. In fact, many of our leading cow families trace back to "Chipper N726", who defied the word "longevity". She remained a productive donor cow to the age of 20 years old. Currently our program utilizes artificial insemination and embryo transfer. Selection pressure for calving ease, maternal influence, moderate growth, disposition and a manageable mature size has been stressed for several generations. Attention to structural correctness, fleshing ability and marketing appeal has been a priority since day one.

Diamond D Simmentals was established in the Flint Hills near Manhattan, Kansas in 1968 by Calvin and Mary Louise Drake. Semen, imported from Canada, was used on Angus and Polled Hereford cows to enhance the polled gene. Artificial insemination has been used for 33 years. Eash-fleshing, polled, rapid-growing females that calve easily are selected as replacement heifers. EPDs are used in selection and carcass quality is stressed. Only AI sires having sound EPDs and correct structure are selected. Both red and black cows comprise the herd of about 40 head. This is one of the earliest Simmental herds established in American that has been in continuous operation. Calvin is a retired professor of Animal Science at Kansas State University and spent several years in the cattle feeding industry.

The Gold Bullion Consignors

The Marple's have been involved with Simmental cattle for the better part of 40 years. Troy grew up in a Simmental family which is still operating in S.E. Kansas today. Nicole has been the secretary for K.S.A. for several years. Logan & Laney are actively involved in K.J.S.A. Marple Farms was established in 2006 and has grown steadily ever since. We utilize a program that consists of 100% AI & embryo transfer. Our breeding program is based on some basic fundamentals. We always select for Calving Ease, Growth, Maternal and Carcass Traits. We won't sacrifice one for another and we refuse to chase the extremes. We are always going to place selection pressure on disposition, structural integrity and phenotype.

Troy, Nicole, Logan and Laney

Ryan, Kayla & Brinley Bodenhausen

Mid-Am Genetics was started in 2008 with the purchase of 2 Simmental and 2 Angus heifers. Founded by Ryan and Kayla Bodenhausen near Muscotah, KS, our herd now consists of around 60 Registered and Commercial Simmental and SimAngus cows. Ryan and Kayla both grew up raising and showing livestock and remain actively involve in the livestock industry on a daily basis as Ryan is employed by Southeast Select Sires and Kayla is an Ag Instructor at USD 377. Our breeding philosophy revolves around 3 major principles, Production, Performance, and Phenotype. We strive to raise cattle that are versatile and can thrive in all operations with those three principles in mind. We are a self-sufficient operation, so cattle are culled/selected for disposition and longevity as well.

Parsons Livestock started building a Simmental program in 2004 when Garrett purchased his first purebred cow while in graduate school. Garrett, Marka and Pate have utilized an extensive embryo transfer and artificial insemination protocol designed around a few extraordinary females to grow the cow herd. Our focus has been on producing phenotypically and genetically superior cattle that display structural excellence, functionality, while optimizing the important production traits of calving ease, growth, carcass merit, and fleshing ability. A strong emphasis is always placed on disposition; only easy to handle cattle will be retained and marketed.
